Hunter Evanoff

Full-Stack Software Engineer

experience

Senior Software Engineer

Keysight, Inc.
Aug 2021 - Present

Rebuilding legacy applications and developing new products using modern frameworks and scalable cloud services.

- Heavy use of AWS cloud services to build full stack applications for our government and private sector customers.
- Tech stack includes React, Django, Docker, Express, Matillion ETL

Full-Stack Web Developer

Boecore, Inc.
Sept 2020 - Aug 2021

Driven full-stack web developer on the Innovation Team, using the newest tech and frameworks to deliver cutting edge products for our government customers.

- Developed a cyber security dashboard from the ground up for our NORAD/Northcom, Air Force, and Space Force customers. Meant to be used by cyber operators and commanders to update, review, and push status changes relating to posture and current security threats in their AOR.
- Developed the product to be blazing fast with a modern tech stack comprised of React, Material-UI, and a Fastify backend.
- Ensured the product had the latest cyber security standards by snuffing out any vulnerabilities with SonarQube, Fortify, and hardened Docker images. We hosted our pipeline on Platform One, the standard for DoD DevSecOps services.
- Worked on the forefront of the product's gateway architecture, which houses four microservices, all of which are containerized with Docker and running Java Spring Boot to handle requests. Each Spring Boot container also interfaces with their own MongoDB instance to store and serve data.
- Developing the architecture of the product to use both functional and class driven React components, to enable flexibility for future growth.
- Working within the agile methodology of Scrum to meet customer requirements and achieve product goals.

Software Developer

James Madison University
Oct 2017 - Sept 2020

Develop and support with Oracle's PeopleSoft applications using PeopleCode, CSS, HTML, and Oracle SQL to meet customer needs.

skills & expertise

Frameworks & Languages
React, JavaScript, Java, Python, Django

UI Frameworks
Material-UI

Markup & Styling
HTML, CSS & SASS

Back End
Node.js, Express, Fastify, SQL, Mongo, Java Spring Boot Applications

Services, Containerization, & Other
AWS (EC2, S3, CodePipeline, Elastic Container Registry), Docker, Kubernetes, Git, JWT, REST API, OAuth
